

Job and Task Analysis for:
Certified LabWindows / CVI Developer

Terminal Objective: Given a moderately complex specification or measurement need, the developer is able to create a solution using LabWindows / CVI.

Task	Objective
Examine the CVI environment	Identify the CVI Windows <ul style="list-style-type: none"> • Workspace window • User Interface window • Source window • Output window • Variable watch window
Navigate the CVI environment	<ul style="list-style-type: none"> • Menus • Toolbars • Options
Demonstrate the use of Function Panels	<ul style="list-style-type: none"> • Access on-line documentation • Declare variables interactively • Execute the function panel using interactive execution
Demonstrate debugging tools	<ul style="list-style-type: none"> • Apply source code stepping and debugging • Demonstrate the use of variables, watch and other debug windows • Set next statement
Demonstrate compiling of a program	<ul style="list-style-type: none"> • Demonstrate program compilation • Compare debug version versus release version
Develop User Interface for the application	Demonstrate the UI editor <ul style="list-style-type: none"> • Demonstrate the UI tools • Demonstrate code builder
Demonstrate User Interface components	<ul style="list-style-type: none"> • Panels • Controls • Custom Controls – create and use • Menus <ul style="list-style-type: none"> ○ Toolbars
Demonstrate User Interface properties	<ul style="list-style-type: none"> • Define Callback functions • Apply general settings for a panel or control <ul style="list-style-type: none"> ○ Modes – use and explain <ul style="list-style-type: none"> • Hot • Normal • Validate • Indicator
Identify files associated with User Interface	<ul style="list-style-type: none"> • Identify the use of: <ul style="list-style-type: none"> ○ .uir file ○ .h file

Job and Task Analysis for:
Certified LabWindows / CVI Developer

Task	Objective
Develop Code for the application	<ul style="list-style-type: none"> • Define the input and output data <ul style="list-style-type: none"> ○ Demonstrate CVI scanning functions ○ Demonstrate CVI formatting functions ○ Demonstrate the use of File IO functions ○ Demonstrate the functions to manipulate custom controls ○ Demonstrate UI library functions <ul style="list-style-type: none"> • Get/Set attribute functions • Get/Set values functions • Event processing functions • Loading/Unloading functions
Develop the code in the Callback functions	<ul style="list-style-type: none"> • For user interface components • For non-user interface components (example: DataSocket)
Define the threading model for the application	<ul style="list-style-type: none"> • Define multithreading terminology • Create threads <ul style="list-style-type: none"> ○ Define thread pools ○ Define thread safe queues and variables
Define the inter-application communication model	<ul style="list-style-type: none"> • Controlling software server through ActiveX automation • Transferring data through a DataSocket connection • Interfacing with LabVIEW • TCP communication • Static libraries for third party compilers <ul style="list-style-type: none"> ○ .lib files ○ .obj file • Dynamic link libraries <ul style="list-style-type: none"> ○ Creating / debugging a Dll using LabWindows / CVI ○ Calling functions inside a Dll • Calling Windows API (SDK)
Develop Instrument Driver	<ul style="list-style-type: none"> • Identify Instrument driver components <ul style="list-style-type: none"> ○ Source code ○ Include file ○ Function panels ○ Documentation • Create an instrument driver <ul style="list-style-type: none"> ○ Create classes and function trees • Editing an instrument driver <ul style="list-style-type: none"> ○ Debug instrument driver • Accessing an instrument driver

Job and Task Analysis for:
Certified LabWindows / CVI Developer

Task	Objective
Deploy and distribute the application	<ul style="list-style-type: none">• Create release executable• Create distribution kit with installer• Explain the need for the run time engine• Explain backward compatibility of run time
