

# Setting Up the Texas Instruments 6711 DSK Target

## LabVIEW™ DSP Module Version 1.0

Complete the following steps to configure the TI 6711 DSK target for the LabVIEW DSP Module.

1. Log on to the host computer as an administrator or as a user with administrator privileges.
2. Configure the parallel port settings in the BIOS of the host computer to set the printer port mode to EPP.
3. Restart the host computer.
4. **(Windows 2000 Only)** Reconfigure the Windows OS Device Manager to match the new settings in the BIOS.
5. Connect the 6711 DSK parallel port connector to the parallel port on the host computer using a DB25 printer cable.
6. Plug in the 6711 DSK power supply to a power source. Connect the 2.5 mm power supply cable connector to the J4 power connector on the 6711 DSK board. The power-on-self-test (POST) runs automatically when you turn on the power.
7. Navigate to `labview embedded\resource\LabVIEW Targets\EmbeddedDSP\DSK6711\hardware support\setup` and double-click `Setup.exe` to launch the 6711 DSK target installation program. Follow the instructions on the screen.
8. Restart the host computer to update the Windows registry settings.
9. Navigate to `labview embedded\resource\LabVIEW Targets\EmbeddedDSP\DSK6711\hardware support\setup` and double-click `Dskntreg.BAT` to launch the 6711 DSK configuration batch program. Follow the instructions in the DOS shell.  

The 6711 DSK configuration batch program modifies the Windows registry when you successfully configure the 6711 DSK target hardware.
10. Restart the host computer to update the Windows registry settings.

You can now use the 6711 DSK as an execution target in the DSP Module.
