Important Information

**Warranty**
The NI PXIe-1078 is warranted against defects in materials and workmanship for a period of one year from the date of shipment, as evidenced by receipts or other documentation. National Instruments will, at its option, repair or replace equipment that proves to be defective during the warranty period. This warranty includes parts and labor.

The media on which you receive National Instruments software are warranted not to fail to execute programming instructions, due to defects in materials and workmanship, for a period of 90 days from date of shipment, as evidenced by receipts or other documentation. National Instruments will, at its option, repair or replace software media that do not execute programming instructions if National Instruments receives notice of such defects during the warranty period. National Instruments does not warrant that the operation of the software shall be uninterrupted or error free.

A Return Material Authorization (RMA) number must be obtained from the factory and clearly marked on the outside of the package before any equipment will be accepted for warranty work. National Instruments will pay the shipping costs of returning to the owner parts which are covered by warranty.

National Instruments believes that the information in this document is accurate. The document has been carefully reviewed for technical accuracy. In the event that technical or typographical errors exist, National Instruments reserves the right to make changes to subsequent editions of this document without prior notice to holders of this edition. The reader should consult National Instruments if errors are suspected. In no event shall National Instruments be liable for any damages arising out of or related to this document or the information contained in it.

**Except as specified herein, National Instruments makes no warranties, express or implied, and specifically disclaims any warranty of merchantability or suitability for any particular purpose. Customer's right to recover damages caused by defects in the software is limited to the amount therefore paid by the customer. National Instruments shall be limited to the amount thereofforepaid by the customer. National Instruments will not be liable for damages resulting from loss of data, profits, use of products, or incidental or consequential damages, even if advised of the possibility thereof.** This limitation of the liability of National Instruments will apply regardless of the form of action, whether in contract or tort, including negligence. Any action against National Instruments must be brought within one year after the cause of action accrues. National Instruments shall not be liable for any delay in performance due to causes beyond its reasonable control. The warranty provided herein does not cover damages, defects, malfunctions, or service failures caused by owner's failure to follow the National Instruments installation, operation, or maintenance instructions; owner's modification of the product; owner's abuse, misuse, or negligent acts; and power failure or surges, fire, flood, accident, actions of third parties, or other events outside reasonable control.

**Copyright**
Under the copyright laws, this publication may not be reproduced or transmitted in any form, electronic or mechanical, including photocopying, recording, storing in an information retrieval system, or translating, in whole or in part, without the prior written consent of National Instruments Corporation.

National Instruments respects the intellectual property of others, and we ask our users to do the same. NI software is protected by copyright and other intellectual property laws. Where NI software may be used to reproduce software or other materials belonging to others, you may use NI software only to reproduce materials that you may reproduce in accordance with the terms of any applicable license or other legal restriction.

**End-User License Agreements and Third-Party Legal Notices**
You can find end-user license agreements (EULAs) and third-party legal notices in the following locations:
- Notices are located in the `<National Instruments>_Legal Information` directory.
- EULAs are located in the `<National Instruments>_Legal Information` directory.
- Review `<National Instruments>_Legal Information.txt` for more information on including legal information in installers built with NI products.

**Trademarks**
LabVIEW, National Instruments, NI, ni.com, the National Instruments corporate logo, and the Eagle logo are trademarks of National Instruments Corporation. Refer to the Trademark Information at ni.com/trademarks for other National Instruments trademarks. Other product and company names mentioned herein are trademarks or trade names of their respective companies.

Members of the National Instruments Alliance Partner Program are business entities independent from National Instruments and have no agency, partnership, or joint-venture relationship with National Instruments.

**Patents**
For patents covering National Instruments products/technology, refer to the appropriate location: Help»Patents in your software, the `patents.txt` file on your media, or the National Instruments Patent Notice at ni.com/patents.

**Export Compliance Information**
Refer to the Export Compliance Information at ni.com/legal/export-compliance for the National Instruments global trade compliance policy and how to obtain relevant HTS codes, ECCNs, and other import/export data.

**WARNING REGARDING USE OF NATIONAL INSTRUMENTS PRODUCTS**
(1) NATIONAL INSTRUMENTS PRODUCTS ARE NOT DESIGNED WITH COMPONENTS AND TESTING FOR A LEVEL OF RELIABILITY SUITABLE FOR USE IN OR IN CONNECTION WITH SURGICAL IMPLANTS OR AS CRITICAL COMPONENTS IN ANY LIFE SUPPORT SYSTEMS WHOSE FAILURE TO PERFORM CAN REASONABLY BE EXPECTED TO CAUSE SIGNIFICANT INJURY TO A HUMAN.

(2) IN ANY APPLICATION, INCLUDING THE ABOVE, RELIABILITY OF OPERATION OF THE SOFTWARE PRODUCTS CAN BE IMPAIRED BY ADVERSE FACTORS, INCLUDING BUT NOT LIMITED TO FLUCTUATIONS IN ELECTRICAL POWER SUPPLY, COMPUTER HARDWARE MALFUNCTION, MALFUNCTIONING SYSTEM SOFTWARE, FITNESS, FITNESS OF COMPILERS AND DEVELOPMENT SOFTWARE USED TO DEVELOP AN APPLICATION, INSTALLATION ERRORS, SOFTWARE AND HARDWARE COMPATIBILITY PROBLEMS, MALFUNCTIONS OR FAILURES OF ELECTRONIC MONITORING OR CONTROL DEVICES, TRANSIENT FAILURES OF ELECTRONIC SYSTEMS (HARDWARE AND/OR SOFTWARE), UNANTICIPATED USES OR MISUSES, OR ERRORS ON THE PART OF THE USER OR APPLICATIONS DESIGNER (ADVERSE FACTORS SUCH AS THESE ARE HEREAFTER COLLECTIVELY TERMED “SYSTEM FAILURES”). ANY APPLICATION WHERE A SYSTEM FAILURE WOULD CREATE A RISK OF HARM TO PROPERTY OR PERSONS INCLUDING THE RISK OF BODILY INJURY AND DEATH, SHOULD NOT BE RELIANT SOLELY UPON ONE FORM OF ELECTRONIC SYSTEM DUE TO THE RISK OF SYSTEM FAILURE. TO AVOID DAMAGE, INJURY, OR DEATH,
THE USER OR APPLICATION DESIGNER MUST TAKE REASONABLY PRUDENT STEPS TO PROTECT AGAINST SYSTEM FAILURES, INCLUDING BUT NOT LIMITED TO BACK-UP OR SHUT DOWN MECHANISMS. BECAUSE EACH END-USER SYSTEM IS CUSTOMIZED AND DIFFERS FROM NATIONAL INSTRUMENTS' TESTING PLATFORMS AND BECAUSE A USER OR APPLICATION DESIGNER MAY USE NATIONAL INSTRUMENTS PRODUCTS IN COMBINATION WITH OTHER PRODUCTS IN A MANNER NOT EVALUATED OR CONTEMPLATED BY NATIONAL INSTRUMENTS, THE USER OR APPLICATION DESIGNER IS ULTIMATELY RESPONSIBLE FOR VERIFYING AND VALIDATING THE SUITABILITY OF NATIONAL INSTRUMENTS PRODUCTS WHENEVER NATIONAL INSTRUMENTS PRODUCTS ARE INCORPORATED IN A SYSTEM OR APPLICATION, INCLUDING, WITHOUT LIMITATION, THE APPROPRIATE DESIGN, PROCESS AND SAFETY LEVEL OF SUCH SYSTEM OR APPLICATION.
Electromagnetic Compatibility Guidelines

This product was tested and complies with the regulatory requirements and limits for electromagnetic compatibility (EMC) as stated in the product specifications. These requirements and limits are designed to provide reasonable protection against harmful interference when the product is operated in its intended operational electromagnetic environment. There is no guarantee that interference will not occur in a particular installation. To minimize the potential for the product to cause interference to radio and television reception or to experience unacceptable performance degradation, install and use this product in strict accordance with the instructions in the product documentation.

The following statements contain important information needed before installing and using this product:

⚠️ **Caution**  This product is intended for use in industrial locations. As a result, this product may cause interference if used in residential areas. Such use must be avoided unless the user takes special measures to reduce electromagnetic emissions to prevent interference to the reception of radio and television broadcasts.

⚠️ **Caution**  To ensure the specified EMC performance, operate this product only with shielded cables and accessories.

⚠️ **Caution**  Changes or modifications not expressly approved by National Instruments could void the user’s authority to operate the hardware under the local regulatory rules.

About This Manual

The *NI PXIe-1078 User Manual* describes the features of the NI PXIe-1078 chassis and contains information about configuring the chassis, installing the modules, and operating the chassis.

Related Documentation

The following documents contain information that you might find helpful as you read this manual:

- *PICMG EXP.0 R1.0 CompactPCI Express Specification*, PCI Industrial Computers Manufacturers Group
- *PCI Express Base Specification*, Revision 2.0, PCI Special Interest Group
- *PXI-5 PXI Express Hardware Specification*, Revision 1.0, PXI Systems Alliance
Getting Started

This chapter describes the key features of the NI PXIe-1078 chassis and lists the kit contents and optional equipment you can order from National Instruments.

Unpacking

Carefully inspect the shipping container and the chassis for damage. Check for visible damage to the metal work. Check to make sure all handles, hardware, and switches are undamaged. Inspect the inner chassis for any possible damage, debris, or detached components. If damage appears to have been caused during shipment, file a claim with the carrier. Retain the packing material for possible inspection and/or reshipment.

What You Need to Get Started

The NI PXIe-1078 chassis kit contains the following items:

- NI PXIe-1078 chassis
- Filler panels
- AC power cable—refer to Table 1-1 for AC power cables
- NI PXIe-1078 User Manual
- Software media with PXI Platform Services 2.0 or higher
- Read Me First: Safety and Electromagnetic Compatibility
- Chassis number labels
If you are missing any of the items listed in Table 1-1, or if you have the incorrect AC power cable, contact National Instruments.

**Key Features**

The NI PXIe-1078 combines a 9-slot PXI Express backplane with a structural design optimized for maximum usability in a wide range of applications.

The key features of the NI PXIe-1078 chassis include the following:

- Accepts 3U PXI Express, Compact PCI Express, and hybrid slot-compatible PXI-1/CompactPCI modules
  - 3 PXI Express peripheral slots directly connected as x1 links to the system slot
  - 5 hybrid peripheral slots connected as x1 links to a PCI Express switch, which is connected to the system through a x4 link
  - 32-bit, 33 MHz PCI connected to each hybrid slot
- Accepts 4-slot wide PXI Express embedded controller
- Rugged, compact chassis with universal AC input
- Auto/high temperature-controlled fan speed based on air intake temperature to minimize audible noise
- Rack mountable
- Optional carrying handle for portability
Chassis Description

Figures 1-1 and 1-2 show the key features of the NI PXIe-1078 chassis front and back panels. Figure 1-1 shows the front view of the NI PXIe-1078. Figure 1-2 shows the rear view of the NI PXIe-1078.

Figure 1-2. Rear View of the NI PXIe-1078 Chassis
Optional Equipment

Contact National Instruments to order the following options for the NI PXIe-1078 chassis.

**EMC Filler Panels**

Optional EMC filler panel kits are available from National Instruments through part number 778700-01.

**Rack Mount Kit**

A rack mount kit option is available for mounting the NI PXIe-1078 chassis into a 19 in. instrument cabinet. Refer to Figure A-3, *NI Chassis Rack Mount Kit Components*, for more information.

Slot Blockers

Optional slot blocker kits are available from National Instruments for improved thermal performance when all slots are not used.

Handle/Feet Kit

An optional side handle and rubber feet kit is available from National Instruments to provide a handle for portability.

NI PXIe-1078 Chassis Backplane Overview

This section provides an overview of the backplane features for the NI PXIe-1078 chassis.

Interoperability with CompactPCI

The design of the NI PXIe-1078 provides you the flexibility to use the following devices in a single PXI Express chassis:

- PXI Express compatible products
- CompactPCI Express compatible 4-Link system controller products
- CompactPCI Express compatible Type-2 peripheral products
- PXI peripheral products
- Standard CompactPCI peripheral products
Refer to Figure 1-4 for an overview of the NI PXIe-1078 architecture.

![Diagram of NI PXIe-1078 Backplane Architecture](image)

**Figure 1-4.** NI PXIe-1078 Backplane Architecture

### System Controller Slot

The system controller slot is Slot 1 of the chassis and is a 4-Link configuration system slot as defined by the CompactPCI Express and PXI Express specifications. It has three system controller expansion slots for system controller modules that are wider than one slot. These slots allow the system controller to expand to the left to prevent the system controller from using peripheral slots.

The backplane routes three PCI Express (PCIe) links of the system slot to peripheral slots as x1 links. The other link of the system slot is routed as a x4 link to the upstream port of a PCI Express switch that in turn provides x1 PCIe links to the remaining peripheral slots. Refer to Figure 1-4 for PCI Express and PCI connectivity.

By default, the system controller will control the power supply with the PS_ON# signals. A logic low on this line will turn the power supply on.
Chapter 1  Getting Started

Note  The Inhibit Mode switch on the backplane must be in the Default position for the system controller to have control of the power supply. Refer to the Inhibit Mode Switch section of Chapter 2, Installation and Configuration, for details about the Inhibit Mode switch.

Hybrid Peripheral Slots

The chassis provides five hybrid peripheral slots as defined by the PXI-5 PXI Express Hardware Specification: slots 5-9. A hybrid peripheral slot can accept the following peripheral modules:

- A PXI Express Peripheral with a x1 PCI Express link through the PCIe switch to the system slot
- A CompactPCI Express Type-2 Peripheral with a x1 PCI Express link through the PCIe switch to the system slot
- A hybrid-compatible PXI Peripheral module that has been modified by replacing the J2 connector with an XJ4 connector installed in the upper eight rows of J2. Refer to the PXI Express Specification for details. The PXI Peripheral communicates through the backplane’s 32-bit PCI bus.
- A CompactPCI 32-bit peripheral on the backplane’s 32-bit PCI bus

The hybrid peripheral slots provide PXI Express functionality (excluding DSTAR and PXI Star) and 32-bit PXI functionality except for PXI Local Bus. The hybrid peripheral slot only connects to PXI Local Bus 6 left and right.

PXI Express Peripheral Slots

There are three PXI Express peripheral slots: slots 2-4. PXI Express peripheral slots can accept the following modules:

- A PXI Express peripheral with a x1 PCI Express link to the system slot
- A CompactPCI Express Type-2 peripheral with a x1 PCI Express link to the system slot

PXI Local Bus

The PXI backplane local bus is a daisy-chained bus that connects each peripheral slot with adjacent peripheral slots to the left and right.

The backplane routes PXI Local Bus 6 between adjacent PXI slots. The left Local Bus 6 from slot 1 is not routed anywhere. The right Local Bus 6 from slot 9 also is not routed anywhere.
Local bus signals may range from high-speed TTL signals to analog signals as high as 42 V.

Initialization software uses the configuration information specific to each adjacent peripheral module to evaluate local bus compatibility.

**Figure 1-5. PXI Trigger Bus Connectivity Diagram**

**PXI Trigger Bus**

All slots share eight trigger lines. You can use these trigger lines in a variety of ways. For example, you can use triggers to synchronize the operation of several different PXI peripheral modules. In other applications, one module can control carefully timed sequences of operations performed on other modules in the system. Modules can pass triggers to one another, allowing precisely timed responses to asynchronous external events the system is monitoring or controlling.

**System Reference Clock**

The NI PXIe-1078 chassis supplies PXI_CLK10, PXIe_CLK100, and PXIe_SYNC100 to every peripheral slot with an independent driver for each signal.

An independent buffer (having a source impedance matched to the backplane and a skew of less than 500 ps between slots) drives PXI_CLK10 to each peripheral slot. You can use this common reference clock signal to synchronize multiple modules in a measurement or control system.
An independent buffer drives PXIe_CLK100 to each peripheral slot. These clocks are matched in skew to less than 100 ps. The differential pair must be terminated on the peripheral with LVPECL termination for the buffer to drive PXIe_CLK100 so that when there is no peripheral or a peripheral that does not connect to PXIe_CLK100, there is no clock being driven on the pair to that slot.

An independent buffer drives PXIe_SYNC100 to each peripheral slot. The differential pair must be terminated on the peripheral with LVPECL termination for the buffer to drive PXIe_SYNC100 so that when there is no peripheral or a peripheral that does not connect to PXIe_SYNC100, there is no clock being driven on the pair to that slot.

PXI_CLK10, PXIe_CLK100 and PXIe_SYNC100 have the default timing relationship described in Figure 1-6.

Figure 1-6. System Reference Clock Default Behavior
This chapter describes how to prepare and operate the NI PXIe-1078 chassis.

Before connecting the chassis to a power source, read this chapter and the Read Me First: Safety and Electromagnetic Compatibility document included with your kit.

Safety Information

**Caution** Before undertaking any troubleshooting, maintenance, or exploratory procedure, carefully read the following caution notices.

This equipment contains voltage hazardous to human life and safety, and is capable of inflicting personal injury.

- **Chassis Grounding**—The chassis requires a connection from the premise wire safety ground to the chassis ground. The earth safety ground must be connected during use of this equipment to minimize shock hazards. Refer to the Connecting Safety Ground section for instructions on connecting safety ground.

- **Live Circuits**—Operating personnel and service personnel must not remove protective covers when operating or servicing the chassis. Adjustments and service to internal components must be undertaken by qualified service technicians. During service of this product, the mains connector to the premise wiring must be disconnected. Dangerous voltages may be present under certain conditions; use extreme caution.

- **Explosive Atmosphere**—Do not operate the chassis in conditions where flammable gases are present. Under such conditions, this equipment is unsafe and may ignite the gases or gas fumes.
Chapter 2  Installation and Configuration

• **Part Replacement**—Only service this equipment with parts that are exact replacements, both electrically and mechanically. Contact National Instruments for replacement part information. Installation of parts with those that are not direct replacements may cause harm to personnel operating the chassis. Furthermore, damage or fire may occur if replacement parts are unsuitable.

• **Modification**—Do *not* modify any part of the chassis from its original condition. Unsuitable modifications may result in safety hazards.

### Chassis Cooling Considerations

The NI PXIe-1078 chassis is designed to operate on a bench or in an instrument rack. Regardless of the configuration, you must provide the cooling clearances as outlined in the following sections.

#### Providing Adequate Clearance

⚠️ **Caution**  Failure to provide adequate clearances may result in thermal related failures in the chassis or modules.

Apertures in the top, bottom, front, rear, and along the sides of the chassis facilitate power supply and module cooling, as shown in Figure 2-2. Air for module cooling enters through a fan intake in the bottom of the chassis. It then exits through the upper sections at the right side and top, as shown in Figure 2-1. Air for cooling the power supply enters the front and left side of the chassis and exits through the rear of the chassis, as shown in Figure 2-2.

Place the chassis on a bench top or in an instrument rack so that the fans (air intakes) and the air outlet apertures along the right side, the top, and the back of the chassis have adequate ventilation. Provide at least 44.5 mm (1.75 in.) clearance above, behind, and on the sides of the unit for adequate venting, as shown in Figure 2-3. High-power applications may require additional clearance.
Figure 2-1. NI PXIe-1078 Module Cooling Airflow Side View

5. Power Supply Cooling Exhaust Vent
Figure 2-3. NI PXIe-1078 Cooling Clearances
Chapter 2 Installation and Configuration

Chassis Ambient Temperature Definition

The chassis fan control system uses intake air temperature as the input for controlling fan speeds when in Auto Fan Speed mode. Because of this, the chassis ambient temperature is defined as the temperature that exists just outside of the fan intake vent on the bottom of the chassis. Note that this temperature may be higher than ambient room temperature depending on the surrounding equipment and/or blockages present. You must ensure that this ambient temperature does not exceed the rated ambient temperature as stated in Appendix A, Specifications.

Setting Fan Speed

The AUTO/HIGH fan-speed selector switch is on the rear panel of the NI PXIe-1078. Refer to Figure 1-2, Rear View of the NI PXIe-1078 Chassis, to locate the fan-speed selector switch. Select HIGH for maximum cooling performance (recommended) or AUTO for quieter operation. When set to AUTO, the chassis intake air temperature determines the fan speed.

Installing Filler Panels

To maintain proper module cooling performance, install filler panels (provided with the chassis) in unused or empty slots. Secure with the captive mounting screws provided.

Installing Slot Blockers

You can improve the chassis cooling performance by installing optional slot blockers. Refer to ni.com for more details.

Rack Mounting

Rack mount applications require the optional rack mount kits available from National Instruments. Refer to the instructions supplied with the rack mount kits to install your NI PXIe-1078 chassis in an instrument rack. Refer to Figure A-3, NI Chassis Rack Mount Kit Components.

Note You may want to remove the feet from the NI PXIe-1078 chassis when rack mounting. To do so, remove the screws holding the feet in place.
Connecting Safety Ground

⚠️ **Caution** The NI PXIe-1078 chassis is designed with a three-position inlet that connects the cord set ground line to the chassis ground. To minimize shock hazard, make sure the electrical power outlet you use to power the chassis has an appropriate earth safety ground.

Connecting to Power Source

⚠️ **Cautions** Do not install modules prior to performing the following power-on test.

To completely remove power, you must disconnect the AC power cable.

Attach input power through the rear AC inlet using the appropriate AC power cable supplied. Refer to Figure 1-2, *Rear View of the NI PXIe-1078 Chassis*, to locate the AC inlet.

Installing a PXI Express System Controller

This section contains general installation instructions for installing a PXI Express system controller in a NI PXIe-1078 chassis. Refer to your PXI Express system controller user manual for specific instructions and warnings. To install a system controller, complete the following steps:

1. Inspect the slot 1 pins on the chassis backplane for any bending or damage prior to installation.
2. Connect the AC power source to the PXI Express chassis before installing the system controller. The AC power cord grounds the chassis and protects it from electrical damage while you install the system controller.
3. Install the system controller into the system controller slot (slot 1, indicated by the red card guides) by first placing the system controller PCB into the front of the card guides (top and bottom). Slide the system controller to the rear of the chassis, making sure that the injector/ejector handle is pushed down as shown in Figure 2-4.
4. When you begin to feel resistance, push up on the injector/ejector handle to seat the system controller fully into the chassis frame. Secure the system controller front panel to the chassis using the system controller front-panel mounting screws.

5. Connect the keyboard, mouse, and monitor to the appropriate connectors. Connect devices to ports as required by your system configuration.

6. Power on the chassis. Verify that the system controller boots. If the system controller does not boot, refer to your system controller user manual.
Figure 2-5 shows a PXI Express system controller installed in the system controller slot of a NI PXIe-1078 chassis. You can place CompactPCI, CompactPCI Express, PXI, or PXI Express modules in other slots depending on the slot type.
Installing Peripheral Modules

Caution  The NI PXIe-1078 chassis accepts a variety of peripheral module types in different slots. To prevent damage to the chassis, ensure that the peripheral module is being installed into a slot designed to accept it. Refer to Chapter 1, Getting Started, for a description of the various slot types.

This section contains general installation instructions for installing a peripheral module in a NI PXIe-1078 chassis. Refer to your peripheral module user manual for specific instructions and warnings. To install a module, complete the following steps:

1. Inspect the slot pins on the chassis backplane for any bending or damage prior to installation.
2. Connect the AC power source to the PXI Express chassis before installing the module. The AC power cord grounds the chassis and protects it from electrical damage while you install the module.
3. Ensure that the chassis is powered off.
4. Install a module into a chassis slot by first placing the module card PCB into the front of the card guides (top and bottom), as shown in Figure 2-6. Slide the module to the rear of the chassis, making sure that the injector/ejector handle is pushed down as shown in Figure 2-6.
5. When you begin to feel resistance, push up on the injector/ejector handle to fully seat the module into the chassis frame. Secure the module front panel to the chassis using the module front-panel mounting screws.
The chassis power inhibit switch has an integrated LED. This LED indicates one of two conditions:

- If the inhibit switch LED is steady green (not flashing), the chassis is powered on and operating normally.
- If the inhibit switch LED is red, the system fans have failed.
Inhibit Mode Switch

On the NI PXIe-1078 backplane is a four-position DIP switch (SW1). Switch 1 of SW1 controls the chassis inhibit mode. (Refer to Figure 2-7.) In its default position (OFF), the PXI Express controller controls the power supply on/off state based on the power switch on the chassis front panel.

![Figure 2-7. Switch 1 of SW1](image)

When switch 1 of SW1 is on, the backplane controls the power supply on/off state. This allows you to circumvent the controller and turn the chassis on or off manually. When switch 1 of SW1 is on, the power supply turns on when the you press the front panel power switch. When the power supply is on, holding down the front panel power switch for about one second turns the power supply off.

⚠️ Cautions  Be careful to avoid damaging the backplane when accessing this switch.

Suddenly removing power from an operating controller may result in loss of data and incorrect behavior on subsequent boots.
Chapter 2  Installation and Configuration

PXI Express System Configuration with MAX

The PXI Platform Services software included with your chassis automatically identifies your PXI Express system components to generate a `pxiesys.ini` file. You can configure your entire PXI system and identify PXI-1 chassis through Measurement & Automation Explorer (MAX), included with your system controller. MAX creates the `pxiesys.ini` and `pxisys.ini` file, which define your PXI system parameters. MAX also provides an interface to route and reserve triggers so dynamic routing, through drivers such as DAQmx, avoids double-driving and potentially damaging trigger lines. For more information about routing and reserving PXI triggers, refer to KnowledgeBase 3TJDOND8 at ni.com/support.

The configuration steps for single or multiple-chassis systems are the same.

![Multichassis Configuration in MAX](image)

**Figure 2-8.** Multichassis Configuration in MAX
PXI-1 System Configuration

1. Launch MAX.
2. In the Configuration tree, click the Devices and Interfaces branch to expand it.
3. If the PXI system controller has not yet been configured, it is labeled PXI System (Unidentified). Right-click this entry to display the pop-up menu, then select the appropriate system controller model from the Identify As submenu.
4. Click the PXI system controller. The chassis (or multiple chassis in a multichassis configuration) is listed below it. Identify each chassis by right-clicking its entry, then selecting the appropriate chassis model through the Identify As submenu. Further expanding the PXI System branch shows all devices in the system that can be recognized by NI-VISA. When your system controller and all your chassis are identified, the required pxisys.ini file is complete.

The PXI specification allows for many combinations of PXI chassis and system modules. To assist system integrators, the manufacturers of PXI chassis and system modules must document the capabilities of their products. PXI Express devices must provide a driver and .ini file for identification. These files are provided as part of the PXI Platform Services software included with your system controller. The minimum documentation requirements for PXI-1 are contained in .ini files, which consist of ASCII text. System integrators, configuration utilities, and device drivers can use these .ini files.

The capability documentation for a PXI-1 chassis is contained in a chassis.ini file provided by the chassis manufacturer. The information in this file is combined with information about the system controller to create a single PXI-1 system initialization file called pxisys.ini (PXI System Initialization). The NI system controller uses MAX to generate the pxisys.ini file from the chassis.ini file.

Device drivers and other utility software read the pxiesys.ini and pxisys.ini file to obtain system information. For detailed information about initialization files, refer to the PXI specification at www.pxisa.org.
Using System Configuration and Initialization Files

The PXI Express specification allows many combinations of PXI Express chassis and system modules. To assist system integrators, the manufacturers of PXI Express chassis and system modules must document the capabilities of their products. The minimum documentation requirements are contained in .ini files, which consist of ASCII text. System integrators, configuration utilities, and device drivers can use these .ini files.

The capability documentation for the NI PXIe-1078 chassis is contained in the chassis.ini file on the software media that comes with the chassis. The information in this file is combined with information about the system controller to create a single system initialization file called pxisys.ini (PXI System Initialization). The system controller manufacturer either provides a pxisys.ini file for the particular chassis model that contains the system controller or provides a utility that can read an arbitrary chassis.ini file and generate the corresponding pxisys.ini file. System controllers from NI provide the pxisys.ini file for the NI PXIe-1078 chassis, so you should not need to use the chassis.ini file. Refer to the documentation provided with the system controller or to ni.com/support for more information on pxisys.ini and chassis.ini files.

Device drivers and other utility software read the pxisys.ini file to obtain system information. The device drivers should have no need to directly read the chassis.ini file. For detailed information regarding initialization files, refer to the PXI Express specification at www.pxisa.org.
3

Maintenance

This chapter describes basic maintenance procedures you can perform on the NI PXIe-1078 chassis.

⚠️ **Caution**  Disconnect the power cable prior to servicing a NI PXIe-1078 chassis.

**Service Interval**

Clean dust from the chassis exterior (and interior) as needed, based on the operating environment. Periodic cleaning increases reliability and cooling performance.

**Preparation**

The information in this section is designed for use by qualified service personnel. Read the *Read Me First: Safety and Electromagnetic Compatibility* document included with your kit before attempting any procedures in this chapter.

⚠️ **Caution**  Many components within the chassis are susceptible to static discharge damage. Service the chassis only in a static-free environment. Observe standard handling precautions for static-sensitive devices while servicing the chassis. Always wear a grounded wrist strap or equivalent while servicing the chassis.
Cleaning

Cleaning procedures consist of exterior and interior cleaning of the chassis. Refer to your module user documentation for information about cleaning the individual CompactPCI or PXI Express modules.

⚠️ Caution Always disconnect the AC power cable before cleaning or servicing the chassis.

Interior Cleaning

Use a dry, low-velocity stream of air to clean the interior of the chassis. Use a soft-bristle brush for cleaning around components.

Exterior Cleaning

Clean the exterior surfaces of the chassis with a dry lint-free cloth or a soft-bristle brush. If any dirt remains, wipe with a cloth moistened in a mild soap solution. Remove any soap residue by wiping with a cloth moistened with clear water. Do not use abrasive compounds on any part of the chassis.

⚠️ Cautions Avoid getting moisture inside the chassis during exterior cleaning, especially through the top vents. Use just enough moisture to dampen the cloth.

Do not wash the front- or rear-panel connectors or switches. Cover these components while cleaning the chassis.

Do not use harsh chemical cleaning agents; they may damage the chassis. Avoid chemicals that contain benzene, toluene, xylene, acetone, or similar solvents.
Specifications

This appendix contains specifications for the NI PXIe-1078 chassis.

⚠️ Caution Specifications are subject to change without notice.

Electrical

**AC Input**

- Input voltage range: 100 to 240 VAC
- Operating voltage range\(^1\): 90 to 264 VAC
- Input frequency: 50/60 Hz
- Operating frequency range\(^1\): 47 to 63 Hz
- Input current rating: 7-3.5 A

线电压调节
- 3.3 V: \(\pm 0.2\%\)
- 5 V: \(\pm 0.1\%\)
- \(\pm 12\) V: \(\pm 0.1\%\)

Efficiency: 70% typical

Power disconnect: The AC power cable provides main power disconnect.

\(^1\) The operating range is guaranteed by design.
**DC Output**

DC current capacity (\(I_{MP}\))

<table>
<thead>
<tr>
<th>Voltage</th>
<th>Maximum Current</th>
</tr>
</thead>
<tbody>
<tr>
<td>+3.3 V</td>
<td>28.5 A</td>
</tr>
<tr>
<td>+5 V</td>
<td>26.5 A</td>
</tr>
<tr>
<td>+12 V</td>
<td>22.0 A</td>
</tr>
<tr>
<td>-12 V</td>
<td>0.75 A</td>
</tr>
<tr>
<td>5 V(_{AUX})</td>
<td>1.5 A</td>
</tr>
</tbody>
</table>

**Notes**

Maximum total usable power is 300 W.

Total usable power derates linearly to 288 W from 40 °C to 50 °C operating ambient temperature range.

The maximum combined power available on +3.3 V and +5 V is 125 W.

The maximum combined power available on +3.3 V and +5 V derates linearly to 100 W from 40 °C to 50 °C operating ambient temperature range.

The maximum available current from +12 V derates linearly to 16.5 A from 40 °C to 50 °C operating ambient temperature range.

The -12 V regulation is ± 5% for loads of 8 A or less on the +12 V rail.
### Backplane slot current capacity

<table>

</tr>
</tbody>
</table>

#### Notes
- Total system slot current should not exceed 45 A.
- PCI V(I/O) pins in hybrid peripheral slots are connected to +5 V.
- The maximum power dissipated in the system slot should not exceed 140 W.
- The maximum power dissipated in a peripheral slot should not exceed 38.25 W.

### Chassis Cooling

- Per slot cooling capacity ................. 38.25 W
- Module cooling system .................... Forced air circulation (positive pressurization) through 2 150 CFM fans with High/Auto speed selector
- Slot airflow direction .................... Bottom of module to top of module
- Module cooling intake .................... Bottom of chassis
- Module cooling exhaust .................... Right side, rear, and top of chassis
- Power supply cooling system ............ Forced air circulation through integrated fan
- Power supply cooling intake ............ Front and left side of chassis
- Power supply cooling exhaust .......... Rear of chassis
Environmental

Maximum altitude..........................2,000 m (800 mbar) (at 25 °C ambient)
Measurement Category......................II
Pollution Degree............................2
For indoor use only.

Operating Environment

Ambient temperature range.............0 to 50 °C
Relative humidity range.................20 to 90%, noncondensing

Storage Environment

Ambient temperature range.............-40 to 71 °C
Relative humidity range..................10 to 95%, noncondensing
**Shock and Vibration**

Operational shock ............................. 30 g peak, half-sine, 11 ms pulse
(Tested in accordance with
IEC-60068-2-27. Meets
MIL-PRF-28800F Class 2 limits.)

Random Vibration

Operational ................................. 5 to 500 Hz, 0.3 g\text{rms}
Nonoperating .............................. 5 to 500 Hz, 2.4 g\text{rms}
(Tested in accordance with
IEC-60068-2-64. Nonoperating
test profile exceeds the
requirements of
MIL-PRF-28800F, Class 3.)

**Acoustic Emissions**

**Sound Pressure Level (at Operator Position)**

Tested in accordance with ISO 7779. Meets MIL-PRF-28800F
requirements.

Auto fan (up to ~30 °C ambient) .......... 49.9 dBA
High fan ........................................ 65.4 dBA

**Sound Power**

Auto fan (up to ~30 °C ambient) .......... 59.3 dBA
High fan ........................................ 74.1 dBA

*Note* Specifications are subject to change without notice.

**Safety**

This product is designed to meet the requirements of the following
standards of safety for information technology equipment:

- IEC 61010-1, EN 61010-1
- UL 61010-1, CSA 61010-1

*Note* For UL and other safety certifications, refer to the product label or the *Online Product Certification* section.
Electromagnetic Compatibility

This product meets the requirements of the following EMC standards for electrical equipment for measurement, control, and laboratory use:

- EN 61326 (IEC 61326): Class A emissions; Basic immunity
- EN 55011 (CISPR 11): Group 1, Class A emissions
- AS/NZS CISPR 11: Group 1, Class A emissions
- FCC 47 CFR Part 15B: Class A emissions
- ICES-001: Class A emissions

Note For the standards applied to assess the EMC of this product, refer to the Online Product Certification section.

Note For EMC compliance, operate this device with shielded cabling.

CE Compliance

This product meets the essential requirements of applicable European Directives as follows:

- 2006/95/EC; Low-Voltage Directive (safety)
- 2004/108/EC; Electromagnetic Compatibility Directive (EMC)

Online Product Certification

Refer to the product Declaration of Conformity (DoC) for additional regulatory compliance information. To obtain product certifications and the DoC for this product, visit ni.com/certification, search by model number or product line, and click the appropriate link in the Certification column.

Environmental Management

NI is committed to designing and manufacturing products in an environmentally responsible manner. NI recognizes that eliminating certain hazardous substances from our products is beneficial to the environment and to NI customers.

For additional environmental information, refer to the Minimize Our Environmental Impact web page at ni.com/environment. This page contains the environmental regulations and directives with which NI complies, as well as other environmental information not included in this document.
Waste Electrical and Electronic Equipment (WEEE)

EU Customers At the end of the product life cycle, all products must be sent to a WEEE recycling center. For more information about WEEE recycling centers, National Instruments WEEE initiatives, and compliance with WEEE Directive 2002/96/EC on Waste and Electronic Equipment, visit ni.com/environment/weee.

电子信息产品污染控制管理办法（中国 RoHS）

中国客户 National Instruments 符合中国电子信息产品中限制使用某些有害物质指令 (RoHS)。关于 National Instruments 中国 RoHS 合规性信息，请登录 ni.com/environment/rohs_china。 (For information about China RoHS compliance, go to ni.com/environment/rohs_china.)

Backplane

Size......................................................... 3U-sized; one system slot (with three system expansion slots) and eight peripheral slots. Compliant with IEEE 1101.10 mechanical packaging. PXI Express Specification compliant. Accepts both PXI Express and CompactPCI (PICMG 2.0 R 3.0) 3U modules.

Backplane bare-board material ............ UL 94 V-0 Recognized

Backplane connectors ..................... Conforms to IEC 917 and IEC 1076-4-101, and are UL 94 V-0 rated
System Synchronization Clocks
(PXI_CLK10, PXIe_CLK100, PXIe_SYNC100)

10 MHz System Reference Clock: PXI_CLK10
Maximum slot-to-slot skew ..........................500 ps
Accuracy ..............................................±25 ppm max (guaranteed over the operating temperature range)
Maximum jitter .....................................5 ps RMS phase-jitter (10 Hz-1 MHz range)
Duty-factor ...........................................45%-55%
Unloaded signal swing ..............................3.3 V ±0.3 V

Note For other specifications refer to the PXI-1 Hardware Specification.

100 MHz System Reference Clock: PXIe_CLK100 and PXIe-SYNC100
Maximum slot-to-slot skew .......................100 ps
Accuracy ..............................................±25 ppm max (guaranteed over the operating temperature range)
Maximum jitter .....................................3 ps RMS phase-jitter (10 Hz-12 kHz range)
2 ps RMS phase-jitter (12 kHz-20 MHz range)
Duty-factor for PXIe_CLK100 .....................45%-55%
Absolute differential voltage
(When terminated with a 50 Ω load to 1.30 V or Thévenin equivalent) ........400-1000 mV

Note For other specifications refer to the PXI-5 PXI Express Hardware Specification.
Appendix A Specifications

Mechanical

Overall dimensions

Standard chassis

Height ...................................... 6.97 in. (177 mm)
Width ....................................... 14.00 in. (355.6 mm)
Depth ....................................... 8.43 in. (214.2 mm)

Note 0.625 in. (15.89 mm) is added to height when feet are installed.

Weight.................................................... 7.55 kg (16.6 lb)

Chassis materials.................................... Stainless Steel, Extruded
Aluminum, Cold Rolled Steel,
and PC-ABS

Finish...................................................... Conductive Clear
Iridite on Aluminum,
Clear Chromate Zinc Plating
on Cold Rolled Steel,
Polyurethane Enamel, and
Polyester Urethane Powder Paint

Figures A-1 and A-2 show the NI PXIe-1078 chassis dimensions. The holes shown are for the installation of the optional rack mount kits. Notice that the front and rear chassis mounting holes (size M4) are symmetrical.

Technical Support and Professional Services

Log in to your National Instruments ni.com User Profile to get personalized access to your services. Visit the following sections of ni.com for technical support and professional services:

- **Support**—Technical support at ni.com/support includes the following resources:
  
  - **Self-Help Technical Resources**—For answers and solutions, visit ni.com/support for software drivers and updates, a searchable KnowledgeBase, product manuals, step-by-step troubleshooting wizards, thousands of example programs, tutorials, application notes, instrument drivers, and so on. Registered users also receive access to the NI Discussion Forums at ni.com/forums. NI Applications Engineers make sure every question submitted online receives an answer.
  
  - **Standard Service Program Membership**—This program entitles members to direct access to NI Applications Engineers via phone and email for one-to-one technical support, as well as exclusive access to self-paced online training modules at ni.com/self-paced-training. All customers automatically receive a one-year membership in the Standard Service Program (SSP) with the purchase of most software products and bundles including NI Developer Suite. NI also offers flexible extended contract options that guarantee your SSP benefits are available without interruption for as long as you need them. Visit ni.com/ssp for more information.

    For information about other technical support options in your area, visit ni.com/services, or contact your local office at ni.com/contact.

- **Training and Certification**—Visit ni.com/training for training and certification program information. You can also register for instructor-led, hands-on courses at locations around the world.
• **System Integration**—If you have time constraints, limited in-house technical resources, or other project challenges, National Instruments Alliance Partner members can help. To learn more, call your local NI office or visit ni.com/alliance.

• **Declaration of Conformity (DoC)**—A DoC is our claim of compliance with the Council of the European Communities using the manufacturer’s declaration of conformity. This system affords the user protection for electromagnetic compatibility (EMC) and product safety. You can obtain the DoC for your product by visiting ni.com/certification.

• **Calibration Certificate**—If your product supports calibration, you can obtain the calibration certificate for your product at ni.com/calibration.

You also can visit the Worldwide Offices section of ni.com/niglobal to access the branch office Web sites, which provide up-to-date contact information, support phone numbers, email addresses, and current events.

### Symbols

- °  Degrees.
- ≥  Equal or greater than.
- ≤  Equal or less than.
- %  Percent.

### A

- A  Amperes.
- AC  Alternating current.
- ANSI  American National Standards Institute.
- Auto  Automatic fan speed control.
- AWG  American Wire Gauge.
Glossary

B

backplane An assembly, typically a printed circuit board, with connectors and signal paths that bus the connector pins.

BNC Bayonet Neill Concelman connector; a commonly used coaxial connector.

C

C Celsius.

CFM Cubic feet per minute.

cm Centimeters.

CompactPCI An adaptation of the Peripheral Component Interconnect (PCI) Specification 2.1 or later for industrial and/or embedded applications requiring a more robust mechanical form factor than desktop PCI. It uses industry standard mechanical components and high-performance connector technologies to provide an optimized system intended for rugged applications. It is electrically compatible with the PCI Specification, which enables low-cost PCI components to be utilized in a mechanical form factor suited for rugged environments.

CSA Canadian Standards Association.

D

daisy-chain A method of propagating signals along a bus, in which the devices are prioritized on the basis of their position on the bus.

DB-9 A 9-pin D-SUB connector.

DC Direct current.

DoC Declaration of Conformity.

D-SUB Subminiature D connector.

Glossary

in. Inches.
inhibit To turn off.

J
jitter A measure of the small, rapid variations in clock transition times from their nominal regular intervals. Units: seconds RMS.

K
kg Kilograms.
km Kilometers.

L
lb Pounds.
LED Light emitting diode.

line regulation The maximum steady-state percentage that a DC voltage output will change as a result of a specified change in input AC voltage (step change from 90 to 132 VAC or 180 to 264 VAC).

load regulation The maximum steady-state percentage that a DC voltage output will change as a result of a step change from no-load to full-load output current.

M
m Meters.
MHz Megahertz. One million Hertz; one Hertz equals one cycle per second.
mile Miles.
ms Milliseconds.
MTBF Mean time between failure.
MTTR Mean time to repair.
N
NEMA National Electrical Manufacturers Association.
NI National Instruments.

P
power supply shuttle A removable module that contains the chassis power supply.
PXI PCI eXtensions for Instrumentation.
PXI_CLK10 10 MHz PXI system reference clock.

R
RH Relative humidity.
RMS Root mean square.

S
s Seconds.
skew Deviation in signal transmission times.
slot blocker An assembly installed into an empty slot to improve the airflow in adjacent slots.
standby The backplane is unpowered (off), but the chassis is still connected to AC power mains.
System controller A module configured for installation in Slot 1 of a PXI chassis. This device is unique in the PXI system in that it performs the system controller functions, including clock sourcing and arbitration for data transfers across the backplane. Installing such a device into any other slot can damage the device, the PXI backplane, or both.
system reference clock

A 10 MHz clock, also called PXI_CLK10, that is distributed to all peripheral slots in the chassis, as well as a BNC connector on the rear of the chassis labeled 10 MHz REF OUT. The system reference clock can be used for synchronization of multiple modules in a measurement or control system. The 10 MHz REF IN and OUT BNC connectors on the rear of the chassis can be used to synchronize multiple chassis to one reference clock. The PXI backplane specification defines implementation guidelines for PXI_CLK10.

System Timing slot

This slot is located at slot 4 and has dedicated trigger lines to other slots.

T

TTL

Transistor-transistor logic.

U

UL

Underwriter’s Laboratories.

V

V

Volts.

VAC

Volts alternating current.

W

W

Watts.
