GETTING STARTED GUIDE

NI 9237

4 AI, ±25 mV/V, 24 Bit, 50 kS/s/ch
Simultaneous, Bridge Completion
This document explains how to connect to the NI 9237. In this document, the NI 9237 with RJ-50 and the NI 9237 with DSUB are referred to inclusively as the NI 9237.

**Note**  Before you begin, complete the software and hardware installation procedures in your chassis documentation.

**Note**  The guidelines in this document are specific to the NI 9237. The other components in the system might not meet the same safety ratings. Refer to the documentation for each component in the system to determine the safety and EMC ratings for the entire system.

## Safety Guidelines

Operate the NI 9237 only as described in this document.

**Caution**  Do not operate the NI 9237 in a manner not specified in this document. Product misuse can result in a hazard. You can compromise the safety protection built into the product if the product is damaged in any
way. If the product is damaged, return it to NI for repair.

## Safety Voltages

Connect only voltages that are within the following limits.

<table>
<thead>
<tr>
<th>Condition</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Between any two pins</td>
<td>±30 V maximum</td>
</tr>
<tr>
<td>Isolation, channel-to-channel</td>

<td>Up to 5,000 m</td>
<td></td>
</tr>
<tr>
<td>Continuous</td>
<td>60 VDC, Measurement Category I</td>
</tr>
<tr>
<td>Withstand</td>
<td>860 Vrms, verified by a 5 s dielectric withstand test</td>
</tr>
</tbody>
</table>
Measurement Category I is for measurements performed on circuits not directly connected to the electrical distribution system referred to as MAINS voltage. MAINS is a hazardous live electrical supply system that powers equipment. This category is for measurements of voltages from specially protected secondary circuits. Such voltage measurements include signal levels, special equipment, limited-energy parts of equipment, circuits powered by regulated low-voltage sources, and electronics.

**Caution**  Do not connect the NI 9237 to signals or use for measurements within Measurement Categories II, III, or IV.

**Note** Measurement Categories CAT I and CAT O are equivalent. These test and measurement circuits are not intended for direct connection to the MAINS building installations of Measurement Categories CAT II, CAT III, or CAT IV.

**Safety Guidelines for Hazardous Locations**

The NI 9237 is suitable for use in Class I, Division 2, Groups A, B, C, D, T4 hazardous locations; Class I, Zone 2, AEx nA IIC T4 and Ex nA IIC T4 hazardous locations; and nonhazardous locations only. Follow these guidelines if you are installing the
NI 9237 in a potentially explosive environment. Not following these guidelines may result in serious injury or death.

**Caution**  Do not disconnect I/O-side wires or connectors unless power has been switched off or the area is known to be nonhazardous.

**Caution**  Do not remove modules unless power has been switched off or the area is known to be nonhazardous.

**Caution**  Substitution of components may impair suitability for Class I, Division 2.

**Caution**  For Division 2 and Zone 2 applications, install the system in an enclosure rated to at least IP54 as defined by IEC/EN 60079-15.

**Caution**  For Division 2 and Zone 2 applications, connected signals must be within the following limits.

<table>

Special Conditions for Hazardous Locations Use in Europe and Internationally

The NI 9237 has been evaluated as Ex nA IIC T4 Gc equipment under DEMKO Certificate No. 07 ATEX 0626664X and is IECEx UL 14.0089X certified. Each NI 9237 is marked ☑ II 3G and is suitable for use in Zone 2 hazardous locations, in ambient temperatures of -40 °C ≤ Ta ≤ 70 °C. If you are using the NI 9237 in Gas Group IIC hazardous locations, you must use the device in an NI chassis that has been evaluated as Ex nC IIC T4, Ex IIC T4, Ex nA IIC T4, or Ex nL IIC T4 equipment.

Caution  You must make sure that transient disturbances do not exceed 140% of the rated voltage.

Caution  The system shall only be used in an area of not more than Pollution Degree 2, as defined in IEC 60664-1.

Caution  The system shall be mounted in an ATEX/IECEx-certified enclosure with a minimum ingress protection rating of at least IP54 as defined in IEC/EN 60079-15.
Caution The enclosure must have a door or cover accessible only by the use of a tool.

Electromagnetic Compatibility Guidelines

This product was tested and complies with the regulatory requirements and limits for electromagnetic compatibility (EMC) stated in the product specifications. These requirements and limits provide reasonable protection against harmful interference when the product is operated in the intended operational electromagnetic environment.

This product is intended for use in industrial locations. However, harmful interference may occur in some installations, when the product is connected to a peripheral device or test object, or if the product is used in residential or commercial areas. To minimize interference with radio and television reception and prevent unacceptable performance degradation, install and use this product in strict accordance with the instructions in the product documentation.
Furthermore, any changes or modifications to the product not expressly approved by National Instruments could void your authority to operate it under your local regulatory rules.

**Special Conditions for Marine Applications**

Some products are Lloyd’s Register (LR) Type Approved for marine (shipboard) applications. To verify Lloyd’s Register certification for a product, visit [ni.com/certification](ni.com/certification) and search for the LR certificate, or look for the Lloyd’s Register mark on the product.

![Caution](image)

**Caution** In order to meet the EMC requirements for marine applications, install the product in a shielded enclosure with shielded and/or filtered power and input/output ports. In addition, take precautions when designing, selecting, and installing measurement probes and cables to ensure that the desired EMC performance is attained.
Preparing the Environment

Ensure that the environment in which you are using the NI 9237 meets the following specifications.

<table>
<thead>
<tr>
<th>Specification</th>
<th>Specification Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating temperature</td>
<td>-40 °C to 70 °C (IEC 60068-2-1, IEC 60068-2-2)</td>
</tr>
<tr>
<td>Operating humidity</td>
<td>10% RH to 90% RH, noncondensing (IEC 60068-2-78)</td>
</tr>
<tr>
<td>Pollution Degree</td>
<td>2</td>
</tr>
<tr>
<td>Maximum altitude</td>
<td>5,000 m</td>
</tr>
</tbody>
</table>

Indoor use only.

**Note**  Refer to the device datasheet on [ni.com/manuals](http://ni.com/manuals) for complete specifications.

Connecting the NI 9237

The NI 9237 provides connections for four half or full bridges, and an external excitation voltage source.
Figure 1. NI 9237 Pinout

Caution  Do not use RJ-45 cables with the NI 9237 with RJ-50. RJ-45 cables damage the RJ-50 connector,
permanently disabling the shunt calibration, regardless of which connector you use.

Connecting a Full Bridge
You can connect a full bridge to the NI 9237.

**Figure 2.** Connecting a Full Bridge to the NI 9237

![Diagram of Full Bridge Connection]

You also can connect floating signals to the NI 9237. If you connect floating signals to the NI 9237, NI recommends connecting the EX- signal to the earth ground or shield for better noise rejection.

Connecting a Half Bridge
You can connect a half bridge to the NI 9237.
You also can connect floating signals to the NI 9237. If you connect floating signals to the NI 9237, NI recommends connecting the EX- signal to the earth ground or shield for better noise rejection.

**Bridge Calibration**

When you insert or remove a new sensor from the NI 9237, slight changes in the excitation voltages can cause a mismatch between the internal half-bridge completion resistors and the half-bridge sensors, which results in a change in the measurement offsets. NI recommends performing bridge calibrations of quarter- or half-bridge sensors after connecting all sensors to the NI 9237 and
after removing or attaching any additional sensor. For more information about changes in voltage offsets in the NI 9237, visit ni.com/info and enter the Info Code rdw9237.

Connecting a Quarter Bridge

You can connect a quarter bridge to the NI 9237 by adding a resistor externally to create a half bridge.

![Diagram of Quarter Bridge Connection](diagram.png)

You also can use a quarter bridge with the NI 9237 with RJ-50 if you use the NI 9944 or NI 9945 Quarter Bridge Completion Accessory.

Figure 4. Connecting a Quarter Bridge to the NI 9237

You also can use a quarter bridge with the NI 9237 with RJ-50 if you use the NI 9944 or NI 9945 Quarter Bridge Completion Accessory.
Connecting TEDS Sensors

You can connect TEDs sensors to the NI 9237.

**Figure 5.** Connecting TEDS Sensors to the NI 9237

Ensure that neither the TEDS data (T+) nor the TEDS return (T-) signal is tied in common to any AI signals on the NI 9237. The NI 9237 connects all the T- signals together internally. The NI 9237 with DSUB has only three T- pins. To connect four TEDS sensors to the NI 9237 with DSUB, wire the TEDS return signals of two of the sensors to one of the T- pins.
