NI SC Express is a family of PXI Express modules with integrated data acquisition and signal conditioning. These devices offer increased speed, accuracy, and synchronization features that are well suited for high-density sensor measurement and signal-conditioning systems. The TC-4353 rack-mount terminal block accessories provides thermocouple plug-in terminal connectivity.

This guide describes how to install and configure the NI PXIe-4353 module and TC-4353 terminal block, thermocouple connector signals, and verify that the system is working properly. Current versions of NI documents are available at ni.com/manuals.

The NI PXIe-4353 is a high-accuracy thermocouple input module that supports up to 32 thermocouple inputs and has 8 cold-junction compensation (CJC) channels for improved CJC accuracy. The TC-4353 terminal block has eight thermistors that provide CJC for thermocouples.

The TC-4353 terminal block is designed for use with the following module as specified:
NI PXIe-4353 ................................................... ±80 mV maximum voltage measurement range

⚠️ **Caution**  Do not supply hazardous voltages (>30 Vrms/42.4 Vpk/60 VDC) to the TC-4353 terminal block.

‼️ **Note**  Refer to the *NI PXIe-4353 Specifications* document for additional voltage and safety information.

The keying of this terminal block prevents it from connecting to other modules that could be damaged by the voltage present on the terminal block. However, you should only use this terminal block with its supported modules.

What You Need to Get Started

To set up and use the TC-4353 rack-mount terminal block with the NI PXIe-4353 module, you need the following items:

- **Hardware**
  - TC-4353 rack-mount terminal block
  - NI PXIe-4353 module
  - PXIe chassis
  - 19 in. rack to accommodate the TC-4353 and NI PXIe-4353
  - Four 10-32 screws of a length suitable for your application (not supplied by NI)
  - SH96-96-1 cable and included standoffs
  - Rack-mount kit (as required for your application)
  - Shielded thermocouple wire and thermocouple miniconnectors as required for your application

- **Tools**
  - Phillips-head and flathead screwdrivers as required by your application
  - Wire cutter
  - Wire insulation stripper

- **Documentation**
  - *NI PXIe-4353 and TC-4353 Installation Guide and Terminal Block Specifications*
  - *Read Me First: Safety and Electromagnetic Compatibility*
  - *NI PXIe-4353 User Manual*
  - PXIe chassis user manual

You can download needed documents from [ni.com/manuals](http://ni.com/manuals).

Installation

**Step 1. Install the Software**

*Note* You must be an administrator to install NI software and devices on your computer.

Before installing the NI SC Express hardware, make sure the following are installed in the order indicated:

1. Your application software, such as LabVIEW, LabWindows™/CVI™, or .NET.
2. NI-DAQmx 9.6 or later.
Note When installing NI application software, such as NI LabVIEW, refer to the *NI-DAQmx Readme* on the software disc for supported software versions. Back up any applications before upgrading software or modifying the application.

Tip Using an NI-DAQmx simulated device, you can test NI-DAQmx applications without installing hardware. Refer to the *Create a Simulated Device* section for instructions for creating NI-DAQmx simulated devices.

Step 2. Unpack and Install the Module

Remove the packaging and inspect the module. Contact NI if the module is damaged. Do not install a damaged module.

Caution The module is static sensitive. Always properly ground yourself and the equipment when handling or connecting to the module.

Complete the following steps to install the NI SC Express module while referring to Figures 1 and 2:

1. Power off the PXI Express chassis. Refer to the chassis manual for chassis installation and configuration instructions.

Caution Refer to the *Read Me First: Safety and Electromagnetic Compatibility*, included with your module, before connecting or disconnecting signal wires.

2. Identify a supported PXI Express slot in the chassis. NI SC Express devices can be placed only in PXI Express Peripheral slots, PXI Express Hybrid Peripheral slots, and PXI Express System Timing slots. Refer to the chassis documentation for details.

Figure 1. Symbols for PXI Express/PXI Express Hybrid/PXI Slots

<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>PXI Express System Controller Slot</td>
<td>PXI Peripheral Slot</td>
<td>PXI Express Hybrid Peripheral Slot</td>
<td>PXI Express System Timing Slot</td>
</tr>
</tbody>
</table>

3. Remove the filler panel and touch any metal part of the chassis to discharge static electricity.

4. Place the module edges into the module guides at the top and bottom of the slot.

Caution When installing the module, make sure both edges are positioned inside the guides and that the module components do not come into contact with adjacent modules.
5. Slide the module along the guides until it reaches the rear connector, then seat the module by pushing the front panel until it is flush with the front panel of the chassis.

6. Secure the module to the chassis using the front-panel captive screws, shown in Figure 2. Tighten the screws to 0.31 N·m (2.7 lb·in.).

**Figure 2. Installing NI SC Express Modules**

---

**Step 3. Install the Terminal Block, Chassis, and Cables**

- **Caution** Refer to the *Read Me First: Safety and Electromagnetic Compatibility* document before removing equipment covers or connecting or disconnecting any signal wires.

- **Caution** Do not supply hazardous voltages (>30 V_{rms}/42.4 V_{pk}/60 V_{DC}) to the terminal block.

- **Note** The chassis can be powered on or off when installing the terminal block.

- **Caution** To ensure the EMC performance specified for the connected NI PXIe-4353 module, operate this product only with shielded thermocouple wires.

To install the rack-mount terminal block into the rack, complete the following steps while referring to Figure 3.

1. Mount the TC-4353 in the desired position by installing and tightening the four rack-mounting screws.
If the chassis is not already installed in the rack, complete the following steps:

1. Attach the PXIe chassis rack-mount hardware to the NI PXIe chassis according to the rack-mount hardware instructions.
2. Mount the PXIe chassis in the rack in the desired position.

**Figure 3.** TC-4353 Installation and Front Connections

1. **Rack-Mounting Screws (4)**
2. **To Thermocouple Sensors**
3. **Thermocouple Miniconnector**
4. **Thermocouple Miniconnector Receptacle**
5. **Shield Drain Wire**
6. **Chassis Ground Screw**
7. **TC-4353 Rack-Mount Terminal Block**
8. **COM Terminals**
9. **To COM**
To install the cables, complete the following steps while referring to Figures 3 and 4.

**Note** For safety purposes and to prevent damage to equipment when high voltages are present, the SH96-96-1 cable is keyed to prevent connection between incompatible terminal blocks, modules, and/or cables.

1. Connect the shield drain wire of the shielded thermocouple wire to the chassis ground screw, shown daisy chained in Figure 3. Make the shield drain wire as short as practical for your application.
2. Connect the COM wires to the COM terminals.
3. Connect the thermocouple miniconnectors to the appropriate thermocouple miniconnector receptacles.
4. Screw the two standoffs into the NI PXIe-4353 module. Tighten the standoffs to 0.90 N · m (8.0 lb · in.).
5. Connect the male end of the SH96-96-1 cable to the TC-4353 and tighten the two jack screws to 0.90 N · m (8.0 lb · in.).
6. Connect the female end of the SH96-96-1 cable to the NI PXIe-4353 and tighten the two jack screws to 0.90 N · m (8.0 lb · in.).

For information about CJC and accuracy considerations refer to the *Cold-Junction Compensation* section.

**Note** For information about sensors, go to [ni.com/sensors](http://ni.com/sensors).
7. Power on the PXIe chassis if it is powered off.

Step 4. Confirm NI SC Express Module Recognition

To confirm module recognition, complete the following steps:

Note Make sure you are using the most recent version of NI-DAQmx. If you are using an older version of the driver software, the NI SC Express terminal block may work only in basic functionality mode. Unsupported terminal blocks appear in Measurement & Automation Explorer (MAX) with an X next to them.

1. Launch MAX.

2. Expand Devices and Interfaces»NI-DAQmx Devices to confirm that MAX detects the module and terminal block. The terminal block should appear beneath its associated module. If your module or terminal block is not listed, press <F5> to refresh MAX. If the module is still not recognized, go to ni.com/support/daqmx.

Tip Using an NI-DAQmx simulated device, you can test NI-DAQmx applications without installing hardware. Refer to the Create a Simulated Device section for instructions for creating NI-DAQmx simulated devices.

3. Right-click the module name and select Self-Test. When the self-test completes, a verification message appears. If an error occurs, refer to ni.com/support/daqmx.

For information about sensors, go to ni.com/sensors.
Step 5. Run Test Panels
1. In MAX, expand Devices and Interfaces»NI-DAQmx Devices.
2. Right-click the device, and select Test Panels.
3. Click Start to test device functions, or Help for operating instructions.
To troubleshoot errors, refer to the NI-DAQmx Help, or go to ni.com/support.

Step 6. Take an NI-DAQmx Measurement

NI-DAQmx Channels and Tasks
Refer to the NI-DAQmx Help for complete information about channels and tasks.
Use the DAQ Assistant to configure virtual channels and tasks in MAX or in your application.

Configure a Task Using the DAQ Assistant from MAX
Complete the following steps to create a task using the DAQ Assistant in MAX:
1. In MAX, right-click Data Neighborhood and select Create New to open the DAQ Assistant.
2. Select NI-DAQmx Task and click Next.
4. Select Analog Input and the measurement type, such as Temperature•Thermocouple or Voltage.
5. Select the physical channel(s) to use and click Next.
6. Name the task and click Finish.
7. Configure the individual channel settings. Each physical channel you assign to a task receives a virtual channel name. To modify the input range or other settings, select the channel. Click Details for physical channel information. Configure the timing and triggering for your task. Click Run.

Note The NI PXIe-4353 cannot generate signals.
Step 7. Use Your NI SC Express 4353 in an Application

For NI software version compatibility, refer to the NI-DAQmx Readme, available from Start»All Programs»National Instruments»NI-DAQmx.

To get started with data acquisition in your application software, refer to the tutorials listed in Table 1.

**Table 1. DAQ Assistant Tutorial Locations**

<table>

</tr>
</tbody>
</table>

*LabVIEW SignalExpress, an easy-to-use configuration-based tool for data logging applications, is at Start»All Programs»National Instruments»LabVIEW SignalExpress.

Programming Examples

NI-DAQmx includes example programs to help you get started developing an application. LabVIEW and CVI examples are located at Help»Find Examples in your application software. Text-based code examples are located at All Programs»National Instruments»NI-DAQ»Text-Based Code Support»ANSI C Examples. Modify example code and save it in an application, or use examples to develop a new application or add example code to an existing application.

For other examples, go to ni.com/info and enter the Info Code daqmexp. For additional examples, refer to zone.ni.com.

Removal

Step 1. Remove the Terminal Block and Cables

To remove the TC-4353 and NI PXIe-4353, complete the following steps while referring to Figures 3 and 4:

Note The chassis can be powered on or off when removing the terminal block.

1. Remove the thermocouple miniconnectors, shield drain wires, and COM wires from the terminal block.
2. Loosen the four jack screws and remove the SH96-96-1 cable from the terminal block and the module.

Note If required for your application, remove the two standoffs from the module.

3. While supporting the terminal block, remove the four rack-mounting screws.
4. Remove the terminal block from the rack.
5. Store the terminal block in an antistatic protective bag.

Step 2. Remove the Module

Caution Do not remove a module with the power on. Doing so can damage the module.

1. Make sure that the chassis is powered off before removing the module.
2. Loosen the captive screws on the top and bottom of the module.

Caution Do not pull the front panel to remove the module. Doing so may cause module components to come into contact with adjacent modules, causing damage to the modules.
3. Pull the captive screws to unseat the module and slowly slide the module along the guides, as shown in Figure 5.
4. Replace the filler panel in the empty slot.
5. Store the module in an antistatic protective bag.

**Figure 5. Removing NI SC Express Modules**

---

**Create a Simulated Device**

To run examples without the hardware installed, use an NI-DAQmx simulated device. To create a simulated device in MAX:
1. Launch MAX.
2. Right-click **Devices and Interfaces»Create New**.
3. From the dialog, select **Simulated NI-DAQmx Device or Modular Instrument**.
4. Type `4353` in the text box at the top of the window.
5. Select the device from the list provided.
6. Click **OK**.
Cold-Junction Compensation

Cold-junction compensation is the process of measuring the temperature of the junction for the thermocouple and applying a representative compensating voltage to the voltage measured by the thermocouple channel. The accuracy of the cold-junction temperature measurement is a key part of the accuracy of the overall thermocouple temperature measurement. The TC-4353 is carefully designed to ensure high-accuracy cold-junction temperature measurements, under a variety of conditions; however, care must be taken to ensure the best possible accuracy. Refer to the Minimizing Thermal Gradients section for guidelines to minimize thermal gradients that could impact the CJC accuracy. Refer to the Specifications section for the CJC accuracy specifications.

The TC-4353 contains eight thermistors that are used to measure the temperature of the adjacent thermocouple junctions for the CJC that is performed when computing the thermocouple temperature measurement. These eight thermistors are measured using the CJC channels on the NI PXIe-4353 module. Each thermistor measures the CJC temperature for a subset of associated thermocouple channels. Figure 6 shows the CJC grouping locations. The dashed lines indicate the channel to CJC associations found in Table 2. NI-DAQmx automatically associates the correct thermistor with the thermocouple measurements when you use the Thermocouple Channel-Type and select built-in for the CJC source.

Table 2. CJC to Thermocouple Channels Associations
Minimizing Thermal Gradients

Thermal gradients can be caused by changes in the ambient air temperature near the terminal block, heat sources from other devices near the terminal block, or by the thermocouple wire if it conducts heat to or away from the terminal junctions. For optimal CJC accuracy performance, ensure that changes in ambient temperature and temperature gradients near the terminal block are kept to a minimum. Follow these guidelines to minimize thermal gradients that could impact the CJC accuracy:

- Use the smallest gauge thermocouple wire suitable for the application. Smaller wire transfers less heat to or from the terminal junction.
- Run thermocouple wiring together near the terminal block to keep the wires at the same temperature.
- Avoid running thermocouple wires near hot or cold objects.
- If you connect any extension wires to thermocouple wires, use wires made of the same conductive material as the thermocouple wires.
- Minimize adjacent heat sources and air flow across the terminal block.
- Keep the ambient temperature as stable as possible.
- Keep the terminal block, module, and chassis in a stable and consistent orientation.
- Install the PXIe filler panels in any unused slots.
- When stacking the system, avoid stacking the terminal block above a heat source as heat rises and can introduce error.
- Allow the thermal gradients to settle after a change in system power or in ambient temperature. A change in system power can happen when the system powers on. Refer to the warm-up time in the NI PXIe-4353 Specifications for more information.
- Replace, clean, or remove the fan filters in the PXIe chassis regularly to ensure proper system cooling.

Calibrate the Module and Terminal Block

You can download available external calibration documents from ni.com/calibration by clicking Manual Calibration Procedures. For external calibration of products not listed there, Basic Calibration Service or Detailed Calibration Service is recommended. You can get information about both of these calibration services at ni.com/calibration. NI recommends performing an external calibration once a year.
More Information

After you install NI-DAQmx, the NI-DAQmx documentation is available from Start⇒ All Programs⇒National Instruments⇒NI-DAQ. Additional resources are online at ni.com/gettingstarted.

You can access online device documentation by right-clicking your module in MAX and selecting Help⇒Online Device Documentation. A browser window opens to ni.com/manuals with the results of a search for relevant documents. If you do not have Web access, documents for supported modules are included on the NI-DAQmx disc.

Troubleshooting

- Go to ni.com/support/install or ni.com/kb.
- If you need to return your National Instruments hardware for repair or device calibration, go to ni.com/info and enter rdsenn to start the Return Merchandise Authorization (RMA) process.

Specifications

Note NI PXIe-4353 module specifications are located in the NI PXIe-4353 Specifications document.

All specifications are typical for the range of 0 °C to 55 °C unless otherwise specified.

Safety Voltages

Isolation (TC-4353)
  Channel-to-channel............................... None
  Channel-to-earth ground....................... 60 VDC, Measurement Category I

Measurement Category I is for measurements performed on circuits not directly connected to the electrical distribution system referred to as MAINS voltage. MAINS is a hazardous live electrical supply system that powers equipment. This category is for measurements of voltages from specially protected secondary circuits. Such voltage measurements include signal levels, special equipment, limited-energy parts of equipment, circuits powered by regulated low-voltage sources, and electronics.

⚠️ **Caution** Do not connect the TC-4353 to signals or use for measurements within Measurement Categories II, III or IV.

⚠️ **Caution** The protection provided by the TC-4353 can be impaired if it is used in a manner not described in this document.

⚠️ **Caution** Refer to the *NI PXIe-4353 Specifications* document for maximum voltage limits. When used with the TC-4353, the isolation voltage is 60 V max from channel or COM to earth ground.
Safety Standards

This product meets the requirements of the following standards of safety for electrical equipment for measurement, control, and laboratory use:

- IEC 61010-1, EN 61010-1
- UL 61010-1, CSA 61010-1

Electromagnetic Compatibility

This product meets the requirements of the following EMC standards for electrical equipment for measurement, control, and laboratory use:

- EN 61326-1 (IEC 61326-1): Class A emissions; Basic immunity
- EN 55011 (CISPR 11): Group 1, Class A emissions
- EN 55022 (CISPR 22): Class A emissions
- EN 55024 (CISPR 24): Immunity
- AS/NZS CISPR 11: Group 1, Class A emissions
- AS/NZS CISPR 22: Class A emissions
- FCC 47 CFR Part 15B: Class A emissions
- ICES-001: Class A emissions

⚠️ Caution  For EMC compliance, operate this product with shielded cables and accessories.

📝 Note  In the United States (per FCC 47 CFR), Class A equipment is intended for use in commercial, light-industrial, and heavy-industrial locations. In Europe, Canada, Australia and New Zealand (per CISPR 11) Class A equipment is intended for use only in heavy-industrial locations.

📝 Note  Group 1 equipment (per CISPR 11) is any industrial, scientific, or medical equipment that does not intentionally generate radio frequency energy for the treatment of material or inspection/analysis purposes.

📝 Note  For EMC declarations and certifications, and additional information, refer to the Online Product Certification section.

CE Compliance

This product meets the essential requirements of applicable European Directives as follows:

- 2006/95/EC; Low-Voltage Directive (safety)
- 2004/108/EC; Electromagnetic Compatibility Directive (EMC)
Online Product Certification

Refer to the product Declaration of Conformity (DoC) for additional regulatory compliance information. To obtain product certifications and the DoC for this product, visit ni.com/certification, search by model number or product line, and click the appropriate link in the Certification column.

Environmental Management

NI is committed to designing and manufacturing products in an environmentally responsible manner. NI recognizes that eliminating certain hazardous substances from our products is beneficial to the environment and to NI customers.

For additional environmental information, refer to the NI and the Environment Web page at ni.com/environment. This page contains the environmental regulations and directives with which NI complies, as well as other environmental information not included in this document.

Waste Electrical and Electronic Equipment (WEEE)

EU Customers  At the end of the product life cycle, all products must be sent to a WEEE recycling center. For more information about WEEE recycling centers, National Instruments WEEE initiatives, and compliance with WEEE Directive 2002/96/EC on Waste and Electronic Equipment, visit ni.com/environment/weee.

Worldwide Technical Support

The National Instruments Web site is your complete resource for technical support. At ni.com/support you have access to everything from troubleshooting and application development self-help resources to email and phone assistance from NI Application Engineers.

National Instruments corporate headquarters is located at 11500 North Mopac Expressway, Austin, Texas, 78759-3504. National Instruments also has offices located around the world to help address your support needs. For telephone support in the United States, create your service request at ni.com/support and follow the calling instructions or dial 512 795 8248. For telephone support outside the United States, visit the Worldwide Offices section of ni.com/niglobal to access the branch office Web sites, which provide up-to-date contact information, support phone numbers, email addresses, and current events.

(For information about China RoHS compliance, go to ni.com/environment/rohs_china.)
