Testing Batteries Is a Multidimensional Challenge

Cost

The battery cells comprise most of the BEV powertrain costs – a closer look at its value chain is imperative

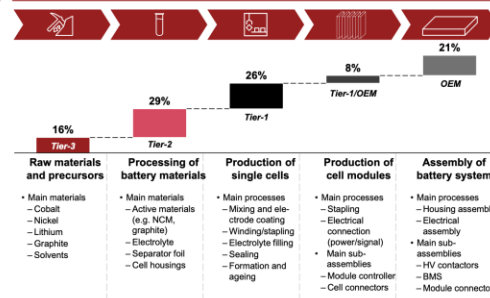

Enable value chain optimization: Significance of battery and cell costs for BEV

Typical cost breakdown BEV powertrain

OEM production costs 2020, 60kWh/100kW, volume class € thousand

Automotive battery value chain and value share

Complexity

Technology Map: Energy Density Target and Progress

Roadmap of energy density goals

Future of energy

Volvo Cars and Northvolt accelerate shift to electrification with new 3,000-job battery plant in Gothenburg, Sweden

February 04, 2022

Volvo Cars and Northvolt have selected Gothenburg to establish a new 50 GWh battery manufacturing plant which will commence operations in 2025.

Speed

2020 - 2026 total Li-ion battery cell demand in GWh

Mapping NI Battery Test Software Workflow to Your Needs

Mapping NI Battery Test Software Workflow to Your Needs

NI Battery Test System

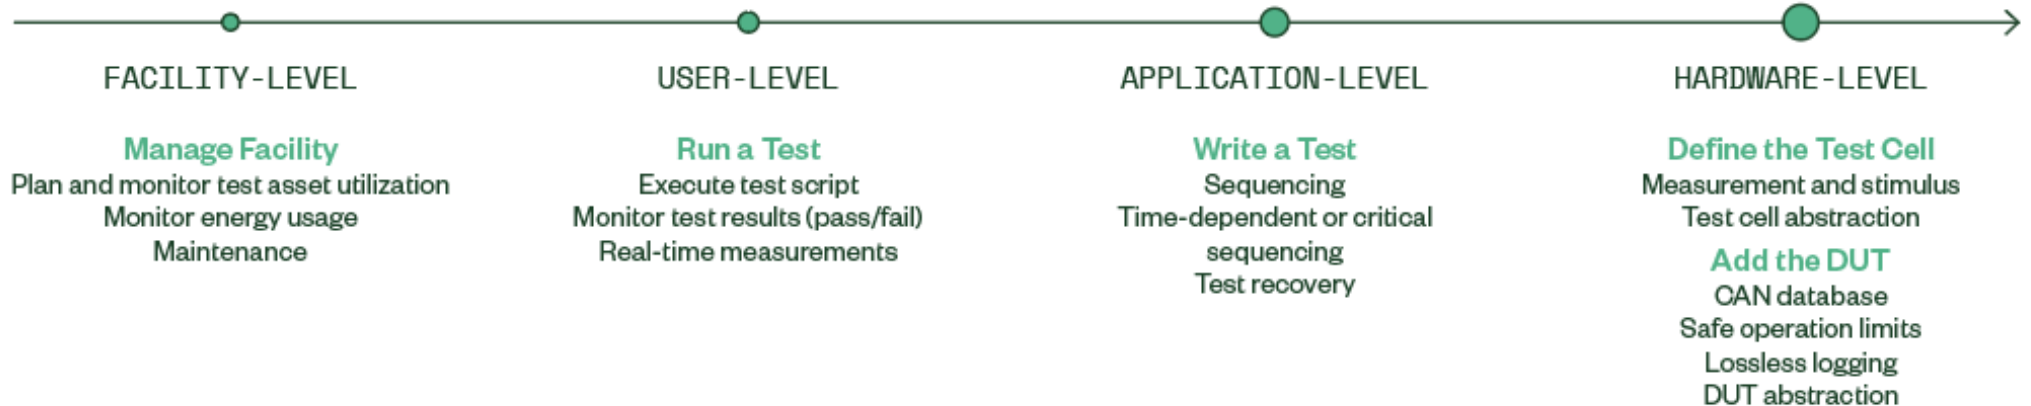

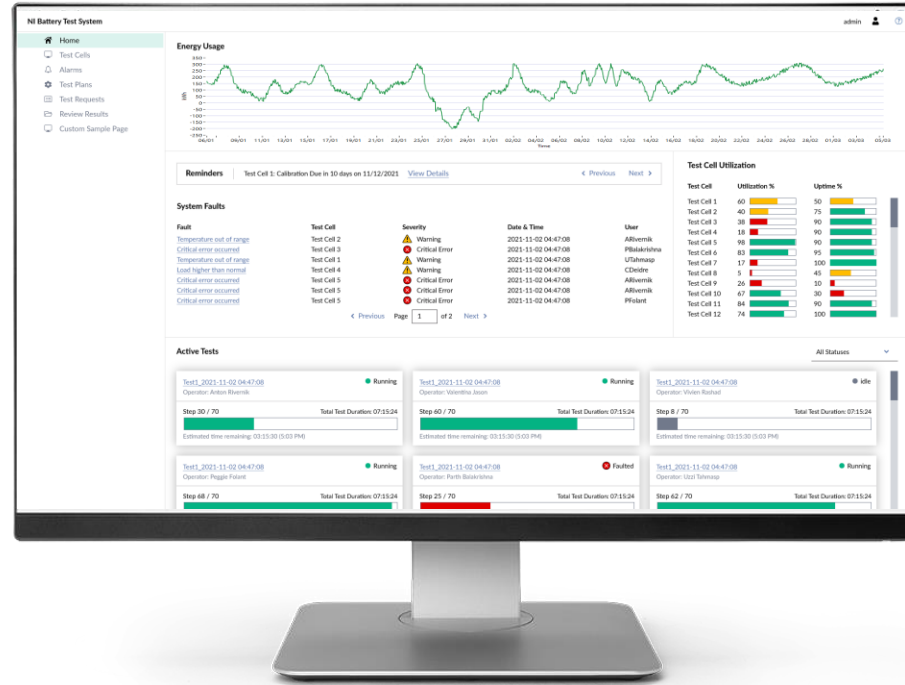

NI Battery Test System (BTS)

- 1 Connection to power electronics, less rework
- 2 Scalable measurements at low cost per channel
- 3 Rugged in-chamber measurements
- 4 Open, out-of-the-box or custom battery test software
- 5 Customized data dashboards for facility management

High Voltage Harness Connection

Laboratory test cell instructions listed here...

Would we like to indicate the source of the information in the list at the left: for example, laboratory test cell or DUT?

Is there any need for an edit mode for this, where the user could live edit and upload images, adjust text, etc.

Connection Instructions For High Voltage Harness on Battery Pack Model Z128

Preparing Connectors for Mating

- Per laboratory safety requirements, ensure proper PPE is worn at all times
- Identify and locate high voltage harness from battery cycler [Figure 1]
- Visually inspect connector for wear or damage
- Identify and locate mating connection on battery pack [Figure 2]
- Visually inspect connector for wear or damage

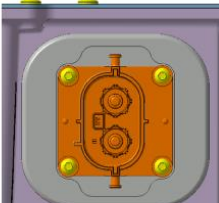

Figure 1: Battery cycler cable

Figure 2: Battery pack bulkhead connection

Making the High Voltage Connections

- ☒ Pick up the high voltage connector from the battery cycler cable
- ☒ Rotate the engagement handle to the open position
- ☐ Engage the high voltage connector into the battery pack bulkhead connector
- ☐ Rotate the engagement handle to the locked position
- ☐ The engagement of the connection should be smooth and continuous, if it is not, consult with test engineering

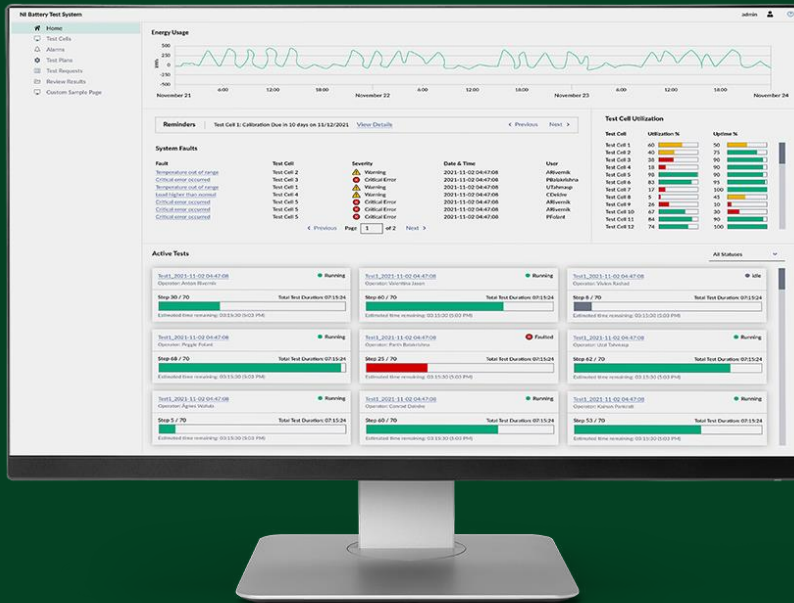

Verifying the High Voltage Connections

- Use the push-pull-push method and ensure the connection is seated securely
- Run the high-voltage connection validation test to electrically check the connection
