

I am interested in obtaining a National Instruments Certification and would like to prepare for and take the certification exam. I believe this certification benefits me, you, and our company.

Benefits for Me:

- Advance, validate, and differentiate my skills in developing applications using NI software.
- Instill greater confidence in my capabilities by demonstrating that I can efficiently create high-quality applications with NI software platforms.

Benefits to You and Our Company:

- Increase productivity
 - The certification process will refine and potentially advance my technical abilities, making me a more productive user of NI software.
- Adopt uniform development practices for more scalable, reliable applications
 - NI certification exams test for the understanding of proper development and documentation practices that will make our applications easier to develop, support, and maintain.
- Lower support costs
 - With increased skills, certified employees can clearly communicate with technical support organizations and resolve problems more quickly.

Recently, National Instruments surveyed Certified LabVIEW Developers who confirmed many of the certification benefits:

- Over 54% said the quality of their work improved
- Nearly 45% said how peers perceived them improved
- Nearly 30% said their certification led to new project opportunities

I believe this information shows valuable reasons to get certified and clear evidence that certification will benefit the company and our projects. The next step is to register for an upcoming certification exam and start on my path to increased knowledge and expertise.

Sincerely,
